*Analyzing Health Equity Using Household Survey Data* Adam Wagstaff 2007-11-02 Have gaps in health outcomes between the poor and better off grown? Are they larger in one country than another? Are health sector subsidies more equally distributed in some countries than others? Are health care payments more progressive in one health care financing system than another? What are catastrophic payments and how can they be measured? How far do health care payments impoverish households? Answering questions such as these requires quantitative analysis. This in turn depends on a clear understanding of how to measure key variables in the analysis, such as health outcomes, health expenditures, need, and living standards. It also requires set quantitative methods for measuring inequality and inequity, progressivity, catastrophic expenditures, poverty impact, and so on. This book provides an overview of the key issues that arise in the measurement of health variables and living standards, outlines and explains essential tools and methods for distributional analysis, and, using worked examples, shows how these tools and methods can be applied in the health sector. The book seeks to provide the reader with both a solid grasp of the principles underpinning distributional analysis, while at the same time offering hands-on guidance on how to move from principles to practice.

**Cases on Applying Knowledge Economy Principles for Economic Growth in Developing Nations** Piaggese, Danilo 2022-01-21 The knowledge economy is the added non-monetary value that society accrues from increased access to data, information, and knowledge in the new, globally connected world. ICT and technology innovation are paving the way for significant economic development opportunities for countries that have embarked in a concerted effort to model their economies according to the knowledge economy principles. Among developing countries, knowledge economy principles are being applied mostly in a sector-wise level, where government intervention with enabling policies coupled with joint efforts by the private sector, academia, and other actors are resulting in durable and sustainable benefits. *Cases on Applying Knowledge Economy Principles for Economic Growth in Developing Nations* examines cases from developing countries in order to derive an adapted model of knowledge economy that could be applied to developing country conditions. This book contributes to the change of paradigm on how to help developing countries in advancing to better conditions by using ICT-related technology. Covering topics such as learning organizations, green technology, and sustainable organizations, this is a dynamic resource for emerging economies, researchers, students, professors, academicians, and multilateral organizations helping developing countries.

**United States Code** United States 2013 "The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited "U.S.C. 2012 ed." As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office"--Preface.

**Rebuilding America's Cities** Paul Robert Porter 1984 A growing cooperation between the public and private sectors indicates that the tasks of redevelopment are too large and complex for either sector to accomplish alone. Some people maintain that government can do few things right; others are equally distrustful of the private sector. As used here, the private sector is considered to be all that is not government. Each of the success stories illustrated is, in part, a "road to recovery," although none appear to have been influenced by a purpose that broad. Paul R. Porter and David C. Sweet present stories of progress in self-reliance that concern neighborhood and downtown recoveries, school improvement, job generation, a regained fiscal solvency, novel financing techniques, helping tenants to become homeowners, and a successful venture in self-help and tenant management in crime-infested neighborhoods. The successes stem from the diverse community roles of Yale University, a medical center, the world's largest research organization, the Clorox Company, a gas company, an insurance company, a newspaper, neighborhood and downtown organizations, city governments and two religious organizations--the Mormon Church and the tiny Church of the Savior. These stories are located throughout the United States, including Akron, Baltimore, Brooklyn, Cincinnati, Cleveland, Columbus, Fort Wayne, Indianapolis, Milwaukee, New Haven, Oakland, Pittsburgh, St. Louis, St. Paul, Salt Lake City, Springfield, Mass., Tampa, and Washington, D.C. The editors have gathered the work of professionals known in the field of urban studies: James W. Rouse, Donald E. Lasater, Rolf Goetze, Dale F. Bertsch, Joel Lieske, Eugene H. Methvin, James E. Kunde, T. Michael Smith, Robert Mier, Carol Davidow, Jay Chatterjee, June Manning Thomas, Norman Krumholz, Larry C. Ledebur, and Robert C. Holland.

**Intellectual Property and Human Development** Tren Wong 2010-10-21 This book examines the social impact of intellectual property laws. It addresses issues and trends relating to health, food security, education, new technologies, preservation of bio-cultural heritage and contemporary challenges in promoting the arts. It explores how intellectual property frameworks could be better calibrated to meet socio-economic needs in countries at different stages of development, with local contexts and culture in mind. A resource for policy-makers, stakeholders, non-profits and students, this volume furthermore highlights alternative modes of innovation that are emerging to address such diverse challenges as neglected or resurgent diseases in developing countries and the harnessing of creative possibilities on the Internet. The collected essays emphasize not only fair access by individuals and communities to intellectual property - protected material, whether a cure, a crop variety, clean technology, a textbook or a tune - but also the enhancement of their own capabilities in cultural participation and innovation.

**Development as Freedom** Amartya Sen 2001-01-18 In *Development as Freedom* Amartya Sen explains how in a world of unprecedented increase in overall opulence millions of people living in the Third World are still unfree. Even if they are not technically slaves, they are denied elementary freedoms and remain imprisoned in one way or another by economic poverty, social deprivation, political tyranny or cultural authoritarianism. The main purpose of development is to spread freedom and its 'thousand charms' to the unfree citizens. Freedom, Sen persuasively argues, is at once the ultimate goal of social and economic arrangements and the most efficient means of realizing general welfare. Social institutions like markets, political parties, legislatures, the judiciary, and the media contribute to development by enhancing individual freedom and are in turn sustained by social values. Values, institutions, development, and freedom are all closely interrelated, and Sen links them together in an elegant analytical framework. By asking 'What is the relation between our collective economic wealth and our individual ability to live as we would like?' and by incorporating individual freedom as a social commitment into his analysis Sen allows economics once again, as it did in the time of Adam Smith, to address the social basis of individual well-being and freedom.

**New Brunswick, New Jersey** David Listokin 2016-06-14 While many older American cities struggle to remain vibrant, New Brunswick has transformed itself, adapting to new forms of commerce and a changing population, and enjoying a renaissance that has led many experts to cite this New Jersey city as a model for urban redevelopment. Featuring more than 100 remarkable photographs and many maps, *New Brunswick, New Jersey* explores the history of the city since the seventeenth century, with an emphasis on the dramatic changes of the past few decades. Using oral histories, archival materials, census data, and surveys, authors David Listokin, Dorothea Berkhout, and James W. Hughes illuminate the decision-making and planning process that led to New Brunswick's dramatic revitalization, describing the major redevelopment projects that demonstrate the city's success in capitalizing on funding opportunities. These projects include the momentous decision of Johnson & Johnson to build its world headquarters in the city, the growth of a theater district, the expansion of Rutgers University into the downtown area, and the destruction and rebuilding of public housing. But while the authors highlight the positive effects of the transformation, they also explore the often heated controversies about demolishing older neighborhoods and ask whether new building benefits residents. Shining a light on both the successes and failures in downtown revitalization, they underscore the lessons to be learned for national urban policy, highlighting the value of partnerships, unwavering commitment, and local leadership. Today, New Brunswick's skyline has been dramatically altered by new office buildings, residential towers, medical complexes, and popular cultural centers. This engaging volume explores the challenges facing urban America, while also providing a specific case study of a city's quest to raise its economic fortunes and retool its economy to changing needs.
